

Enthusiastic start of the FIREFLY project

On 20 and 21 October 2011 the Kick-off meeting of the FIREFLY project took place, perfectly hosted by Tyco Electronics Netherlands BV in 's-Hertogenbosch (NL). The meeting was used to learn more about each other's expertise and of course for having thorough discussions about the work to be done. Bert Jan Offrein of IBM showed us the roadmap towards one of the main applications of our technology, data communication in the 'optical computer'. It was a very good start of a very ambitious project in which all partners are very eager to add their specific knowledge.
